

ICMF - 17

Sunday 5 July 2026 - Friday 10 July 2026

Book of Abstracts

Contents

Motion and flow of an electrically conducting particle/drop subject to an oscillating magnetic field.	1
Making molecular changes visible using near-surface transport of micron-sized magnetic particles	2
Brownian motion of DNA-functionalized magnetic nanoparticles	3
Interparticle interactions between superparamagnetic nanoparticles: The modified mean-field approach	4
Torque and flow induction in magnetic emulsions under rotating and traveling-wave magnetic fields	5
Mechanical Response of Soft Magnetoactive Elastomers to Magnetic Fields	6
Magnetic field control of active stress and flow in magnetotactic bacterial suspensions	7
Polar-Driven Self-Assembly of Magnetic Nanoplatelets in a Multiferroic Nematic	8
Exploring anisotropic magnetic particles as optical probes for microscaled magnetic stray field landscapes	9
Nonlinear Thermal-Origin Effect of Ferrofluids with Different Stabilization Mechanisms with Visible and IR Wavelengths	10
Machine Learning assisted 3D Tracking, Evaluation and Analysis of near-substrate transported Superparamagnetic Microparticles in Liquids for Sensing Applications	11
Identifying the configuration of surface-bound DNA by tracking the Brownian motion of magnetic nanoparticles	12
Experimental and Theoretical Study of the Magneto-Optical Properties of Fe and Fe ₃ O ₄ Nanodispersed Particles	13
Fundamental characteristics of particle collection by a single dielectric barrier discharge plasma actuator using magnetic fluid electrodes for air purification	14
Multipolar Magnetic Active Matter	14
Tunable Magnetic and Electrochemical Behavior in Spinel Ferrite-CNT Nanocomposites for Energy and Environmental Applications	15
Ultrasound monitoring of magnetic separation in hybrid emulsion systems	17

Morphologically Driven Magnetic Fluid Hyperthermic Properties of Mn _{0.5} Zn _{0.5} Fe ₂ O ₄ -based Magnetic Fluid	18
Computational modeling of near surface magnetic microparticle transport for potential biosensing applications	19
A mean-field and propagation-of-chaos approach to magnetic nanoparticles	20
Magnetic liquid marbles as potential chemical sensors	21
Investigation of characteristic times, thixotropy and reversibility of the magnetorheological effect for a magnetorheological fluid	22
The influence of particle morphology on the magneto-mechanical and rheological behaviour of magnetorheological elastomer (MRE)	22
Enhanced Photothermal Conversion efficiency of Magnetic Fluids for sustainable and resilience solar energy utilization	23
Deconvolution of magneto-dielectric relaxation in magnetic fluids stabilised by bilayer and dispersed in mixed oil	25
Ultrasonic release of magnetic nanoparticles from modified textile	26
Interplay between Microstructure and Heating Properties of Semi-crystalline Polymer Nanocomposites	27
In-Depth Investigation of the Magnetically Related Properties of Iron Oxide Nanospheres	28
Magnetic Field amplitude optimization for uniform heat dissipation in magnetic hyperthermia	28
Energy Harvesting Using Torsional Deformation of Permanent Magnet Elastomers	30
Magnetic Field Effects on Heat Transfer During Phase Change Transition in Temperature-Sensitive Magnetic Fluids	31
Prediction of magnetorheological fluid mechanical properties under different conditions based on MultKAN and adaptive threshold loss	32
Adaptive Vibration Behavior of Circular Sandwich Plates with Graphene-Reinforced MRE Core and Auxetic Metamaterial Skins	33
Tuning the Curie Temperature of Mn-Substituted Iron Oxide Nanoparticles for Self-Regulated Magnetic Welding of Thermoplastics	34
Design and Performance Analysis of a Quasi-Zero Stiffness Isolator with Tunable Positive Stiffness Using Magnetorheological Elastomer	35
Magnetorheological Hysteresis in Concentrated Magnetic Elastomers	36
Active Rosensweig Patterns	37
Magnetically Tunable Adhesion and Stiffness of Compliant Magnetoactive Elastomer Surfaces	38
Clustering of Magnetically Soft Particles: Efficient Description beyond the Dipole Model	39

Magneto-rheological clutch to control variable speed for pumping units	40
Highly Deformable Magnetic SIPN Hydrogels for Soft Actuation	41
How Magnetic Moment Angle Governs Self-Assembly and Aggregation Kinetics of Cubic Hematite Particles in a Quasi-Two-Dimensional System	42
Magneto-orientational coupling and helical unwinding in ferrocholesteric nanocomposites doped with α -FeOOH nanorods	43
Thermal Tuning of Magneto-Elasticity in pNIPAM-Alginate IPN Hydrogels	44
Effect of ferrofluid temperature and container fill level on vibration energy harvesting	45
Field Induced Dynamic Pattern Formation in Ferromagnetic Ferrofluids	46
Disruption of Insulin Amyloid Fibrils Using Nanoparticles and External Magnetic Fields: Comparative Effect of Pulsed and Rotating Magnetic Fields	47
PEG-coated ZnO/Fe ₃ O ₄ nanoparticles: design, stability, and potential in cancer therapy	48
Microstructure characterization of structured magnetorheological elastomers	49
Reconfigurable Diffractive Optical Structures Enabled by the Magnetic Shape Memory Effect in Magnetoactive Elastomers	50
Three components of magnetic fluids as three sources of their new properties.	51
Controlling Living Matter using Ferrofluids	52
Lifespan of static magnetic fluid seals and their recovery via shaft rotation: The interplay between magnetophoresis and hydrodynamics	53
Fractal analysis of instability structures of a miscible ferrofluid droplet in a Hele-Shaw cell under a perpendicular magnetic field	54
Active control of thermomagnetic forced convection in flat microchannels via induced magnetic fields	55
Fibrin matrices dissolution enhanced by self-assembling magnetic colloid's actuation	56
Hybrid BD-MC-kMC Framework for Predicting Nanoparticle Easy Axis Dynamics in Hyperthermia	57
Field-induced hexagonal ordering in confined magnetic droplet assemblies	58
High magnetic field pulse effect on magnetic and dielectric properties of transformer oil-based ferrofluids.	59
Hard meets soft: tuning binary ferrofluids	60
Fusion of Magnetic Liposomes with Model Membranes and Extracellular Vesicles	61
Impact of nanoparticle easy-axis reorientation on heating efficiency in magnetic hyperthermia	62
Tuning the Viscoelastic Properties of Hydrogels via Surface-Engineered Iron Nanoparticles	63

Study of accelerated thermal aging of transformer oil-based ferrofluid	64
Deformation and breakup of sessile and pendant magnetic fluid droplets on a magnetized sphere	65
Microparticle restructuring in densely packed magneto-active elastomers probed by neutron scattering	66
Effects of fluid–particle interactions on the structure formation in magnetic fluids	67
Development of a Magnetic Exclusion-Based Bubble Removal Device	68
Structured magnetic fluids under quasi-static shear	69
Magnetically Driven Transport on Microlamellar Surfaces	70
Non-volatile memory effect in liquid crystals doped with aerosil and magnetic nanoparticles	71
Rigid-dipole Ferrofluids for 3D viscosity and temperature imaging with MPI	72
Effects of Lattice Geometry and Magnetic Field on Phase Change Behavior of Water-Based Temperature-sensitive Magnetic Fluids	73
Multiple ferrofluid droplet impact on a solid wall under a uniform magnetic field: A fractional step lattice Boltzmann investigation	75
Rheological behavior of concentrated magnetic suspensions submitted to an oscillating shear flow	76
Heat Transfer Enhancement of Magnetic Microparticle Dynamics inside Confined Microchannels under an External Magnetic Field	77
Design and realization of magneto-electric nanoplatelets	78
Synthesis of Cobalt-Doped Ferrite Nanoparticles by Green Hydrothermal Synthesis: From Shape Anisotropic Particles to Chain-like Structures	79
Improving filler dispersion in magnetoactive elastomers via DBSA surface modification of hexaferrites	80
Magnetothermal-Triggered Response and Self-Healing of Recyclable and Reprocessable Nanocomposites for Actuation Systems	81
Thermomagnetic instability of Taylor-Couette flow in ferrofluids	82
BSA-Coated Magnetic Nanoparticles for Betulinic Acid Delivery and MRI Contrast Enhancement	83
Coupled Brownian and Néel Relaxation in Magnetic Nanoparticles: Regimes and Losses .	84
From bulk to interface: Critical role of surface-driven nanoparticle localization on the magnetorheological properties of ferrofluid emulsions	85
Magnetic fluid based on YIG and Ce:YIG: glycothermal synthesis and magneto-optical properties	86

Impact of Synthesis Strategy on the Hyperthermic Efficiency of Magnetite-Loaded PLA Nanocarriers for Targeted Drug Delivery	87
Magnetically Driven Traveling Wave Propagation in Magnetically Active Elastomers	88
Magnetic fluid flow from a slot with moving boundary	89
Exploiting dynamical magnetization for oligonucleotide detection in biological fluids	90
Reusable mask patterning (REMAP) opens new questions in field-induced aggregation and ordering	91
Diffusion–Agglomeration Behavior of Magnetic Nanoparticles in Magnetic Hyperthermia	92
From Magnetic Fluid to Immobilized State: Reproducible Heating of Iron Oxide Nanoparticles under AMF and RMF	93
Soft Magnetic Behavior and Multifunctional Performance of Mn–Zn Ferrite/MWCNT Nanocomposites for Energy Storage and Photocatalysis	94
Investigation of the structure formation process of magnetic elastomers using “intermediate states” and X-ray tomography	95
Tunable Compliance in Robotic Hands through Magnetic Field	96
Effect of Magnetic Exclusion by Ferrofluids on Mesh-Electrode Water Electrolysis	98
Density Separation versus Dipolar Chaining of Magnetic Holes	100
Triaxial Fuzzy Control of a Compact Magnetorheological Vibration Absorber for Precision Platforms	101
Magneto-Plasmonic Nano-Objects with Tunable Domain Architectures –Experiments and Simulations	102
Colloidal stability of aqueous ferrofluids with iron oxide nanoparticles obtained by means of laser pyrolysis	103
Ferronematics Phases: Exploring the Effects of Functionalized Hematite Anisotropic Nanoparticles in Liquid Crystal Order	104
Viscoelasticity and Fluorescence of polymer-based magnetically switchable soft composite	105
Multicore Iron Oxide Nanoflowers: Effect of Poly-L-lysine Functionalization on Magnetic and Physicochemical Properties for Biomedical Applications	106
Measuring Viscoelastic Properties of Magnetic Gels with Dissipative Particle Dynamics	107
Influence of Rod Length and Particle Concentration on AC Magnetization Properties of Spherical and Rod-shape Magnetic Nanoparticles	108
Role of laterally shifted dipoles in 3d microstructure formation of Janus magnetic colloids: insights from Brownian dynamics simulations	109
Direct Observation of Field-Driven Magnetic Reconfiguration in Self-Assembled Nanoparticle Chains	110

Preparation of Superhydrophilic Magneto-active Elastomers through Oxygen Plasma Treatment	112
Numerical Analysis toward the Rosensweig Instability by the Boundary Element Method Considering Multiplicity and Singularity	113
Insights into internal magnetic structure of iron oxide nanoparticles: a combined small-angle neutron scattering and magnetometry study	115
Proposal of a Thermoresponsive Gel-Based Temperature-Sensitive Magnetic Fluid	117
Particle-Matrix Coupling in Magnetic Gels: Simulations and Experiments	118
Binder-free Setup to Assess Magnetic Nanocatalysts in a Study of Novel Cu_xO_y -IONP-clusters for Electrochemical Nitrate Reduction	119
Orientational bistability and field-controlled switching of a superparamagnetic dimer	121
Magnetic-field-actuated beating of magnetoactive cilia for object transportation	122
Insights into the energy landscape of janus and triblock magnetic particles	123
Three-dimensional pattern formation and synchronization regimes of magnetic rods under rotating fields	124
Engineering Dynamic Magnetic Response of Multicore Nanoparticles: Shape-Induced Enhancement of Low-Frequency Losses	125
Interparticle Correlations in FORC Diagrams of Ellipsoidal Multicore Nanoparticles	126
Beyond rings and chains: exploring porous crystals and flexible networks with two patch magnetic particles	127
Interfacial Rheological Characterisation of Magnetorheological fluids at carrier fluid interface	128
Dispersion Stability of Surface-Modified Magnetic Nanoparticles in CO_2 -expanded liquids	129
Dipl.-Ing.	130
Measuring the dynamics of transient networks in ferrogranulate: are there TWO timescales in only One constituent?	131
Activity out of a ferrogranular gas: How do ferrobots self-assemble and propagate?	132
Effect of Cross-Sectional Geometry on Magnetic Actuation of Lamellar Structures from Magnetoactive Elastomers	133
A Parametric Study of Bubble Dynamics Under Magnetohydrodynamic Effects: Control of Cavitation and Sonoluminescence	134
Shear flow induced magnetic field in suspensions of magnetic nanoplatelets	135
Theory and Simulation of the Pyromagnetic Coefficient of a Ferrofluid	136
Tabletop setup for the characterization of magnetic nanoparticles with magnetorelaxometry and magnetoresistive sensors	137

Quantification of the effect of dipole-dipole interaction on non-linear magnetic response of structurally different aggregates of magnetosomes	138
Passive Heat Spreader Using Temperature-Sensitive Magnetic Fluids with Controlled Magnet Arrangement	139
Locomotion of magnetic surface walkers by rotating and gradient magnetic fields	140
Magnetic properties of magnetic elastomers filled with magnetic particles with internal magnetic anisotropy	141
Magnetic Field-Assisted Assembly of Anisotropic Nanostructures: From Design to Application	142
Does Order Matter in Magnetic Hyperthermia? Vesicle Chaining, Particle Heating, and Biological Consequences	143
Nonequilibrium fluctuations and nonlinear dynamic response of magnetic nanoparticles to time-dependent magnetic fields	144
Equilibrium and Out-of-Equilibrium Explorations of Self-Assembled Magnetic Colloids	145
Lubrication Characteristics of Oil-based Magnetic Fluid Retained on Sliding Surface under Surface Contact Condition	146
Simulation of Permanent Magnet Elastomers Utilizing Discrete Elastic Rods	147
Self-propelled magnets - from magnetotactic bacteria to magnetic active matter	148
Continuum-based modeling of hard-magnetic magneto-active polymers across the scales	149
Kinetic Control of Iron Oxide Nanostructure and Its Impact on Magnetic Heating Performance	150
Field-Controlled Self-Diffusion in Ferrogranular Mixtures	151
Active ferrogranular matter: A robust dipolar dual-bead theory of ferrobot self-assembly and propagation	152
Molecular dynamics simulations of Magneto-active elastomers	153
Magnetic Anisotropy Effects in Nanoscale Polymer Chains	154
Patterned Magnetic Fluids with Magnetic Colloidal Polymers	155
